📍 St. Louis, MO | TS/SCI Clearance

Professional Summary

Geospatial Software Engineer with 15+ years building production WebGIS platforms and spatial data systems. Currently leading full-stack development at Carbon Solutions, architecting React/OpenLayers frontends and Django Ninja/PostGIS backends for carbon sequestration and capture data visualization. Former full-stack developer at the National Geospatial-Intelligence Agency, delivering mission-critical systems for U.S. Government operations worldwide. Founded GeoBrad.dev to provide pro bono geospatial solutions for nonprofits and researchers addressing environmental and social challenges.

Technical Skills

Frontend: JavaScript, React, React Native, OpenLayers, Leaflet, CesiumJS

Backend: Python, Django, GeoDjango, Django Ninja, FastAPI, Node.js

Databases: PostgreSQL, PostGIS, SQL

DevOps: Docker, Git, GitLab CI/CD, GitHub Actions

Geospatial: WebGIS, GEOINT, Spatial Analysis, Geoprocessing

Professional Experience

Lead Geospatial Software Engineer, Carbon Solutions

Sep 2025 - Present

Lead architecture and delivery of production WebGIS platforms for carbon capture, storage, and emissions intelligence across the United States.

Design full-stack geospatial systems using React/OpenLayers, Django Ninja, and PostGIS for high-performance spatial querying and interactive visualization of environmental datasets.

Architect scalable spatial APIs and microservices supporting real-time geoprocessing, vector tile delivery, and spatial analytics workflows.

Own cloud infrastructure and CI/CD pipelines, ensuring reliable deployment and performance optimization of geospatial services.

Collaborate with climate scientists, data engineers, and executive stakeholders to translate decarbonization requirements into technical solutions.

Full-Stack Software Developer | Geospatial and Imagery Analyst, National Geospatial-Intelligence Agency

2010 - Sep 2025

Progressed from geospatial analyst to full-stack developer over 15-year career, delivering mission-critical systems supporting worldwide U.S. Government operations.

Developed secure web applications for Aeronautical Safety and Navigation Office using React, FastAPI, and PostGIS spatial databases.

Built interactive mapping tools and microservices for aeronautical safety visualization and workflow automation.

Deployed scalable platforms with GitLab CI/CD, Docker, and PostgreSQL/PostGIS backends.

Supported time-sensitive intelligence operations and targeting missions for FBI and DIA.

Deployed to embassies and military commands in Iraq, Saudi Arabia, South Korea, and aboard U.S. Navy's 7th Fleet as GEOINT analyst.

Education

Master of Science in Spatial Data Science, Penn State University, 2023

Master of Arts in International Relations, Webster University, 2019

Bachelor of Science in Geography, South Dakota State University, 2009

Certifications

Cesium Certified Developer

DoD Certified Python Instructor

Penn State: Geospatial Programming & Web Map Development

GEOINT Professional Certifications

Docker Foundations Professional
